KUTUPSAL KOORDINATLAR

n ve y dik koordinatları düzlemdeki bir P nolitasını bir dikey doğru ile bir yatay doğrunun kesismesi olarak belirtir. Kutupsal koordinatlar ise bir P nolitasını, bir gemberk merkezinden gikan bir isinin kesismesi olarak belirtir. Kutupsal koordinatı tanımlamak igin önce bir O orijini (bura kutup denir) ve bir başlaygıq isini sabitlenir. Bu durunda düzlemde bir P nolitasını, (r.O) kutupsal koordinat gifti ile posterebiliriz.

* Bir nolitayi temsil eden sonsit tane kutupsal loordinat aifti vardir.

* toer r=0 ise o ne olursa olsun P kutuptur

a Eper 120 ise P, O agili isinin ters yonunderii OtTI agili isin üzerinde olup kutuptan Irl birim uzaklılıtadır.

Simetri

1. simetri ozellipi: $r = f(\theta)$ fonksiyonunda $\theta \rightarrow -\theta$ yazılırsa

a) f(-0) = f(0) = r ise kutup eksenine pore simetri vardir.

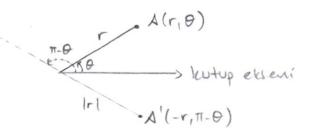

b) $f(-\theta) = -f(\theta) = -r$ ise $\theta = \frac{\pi}{2}$ ye pore simetri vardir.

2 simetri szellyő: r=f(0) fonksigonunda 0-) TI-O yazılırsa

a)
$$f(\pi - \theta) = f(\theta) = r$$
 ise $\theta = \frac{\pi}{2}$ ye por simetri vardir.

b) $f(\pi - \theta) = -f(\theta) = -r$ ise kutup eksenine pone simetri vardur.

3-simetri brellipi:

a)
$$f(\pi+\theta) = f(\theta) = r$$
 ise origine pore simetriletir.

b) (r,0) epri berinde iken (-r,0) de épri berinde no >k.1

$$x = r\cos\theta = f(\theta)\cos\theta$$

$$y = r\sin\theta = f(\theta)\sin\theta$$

$$dx = \frac{dy/d\theta}{dx/d\theta} = \frac{f'(\theta)\sin\theta + f(\theta)\cos\theta}{f'(\theta)\cos\theta - f(\theta)\sin\theta}$$

(r,0) mktasında r=f(0) nin epimi:

$$\frac{dy}{dx}\Big|_{(r,\theta)} = \frac{f'(\theta)\sin\theta + f(\theta)\cos\theta}{f'(\theta)\cos\theta - f(\theta)\sin\theta}\Big|_{(r,\theta)}$$
